# DIRECT TO FILM TRANSFERS

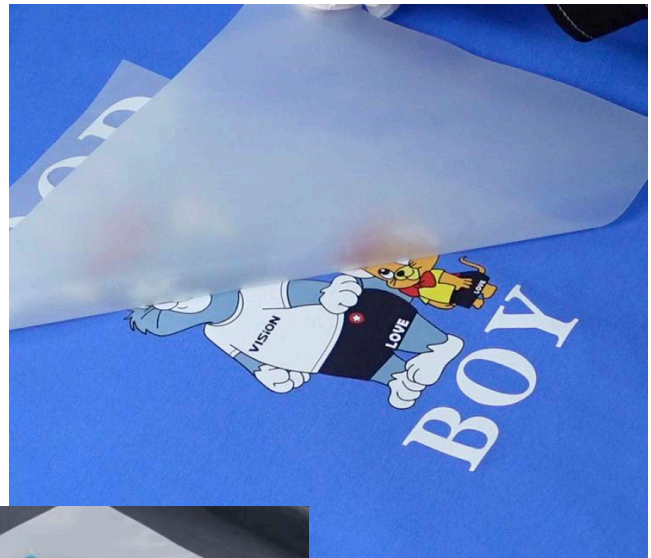

PREMIUM QUALITY

**NEW!**

## DTF Transfers

Direct to film printing is a unique printing technology that involves printing designs onto special films for transfer onto garments. DTF printing is a heat transfer process that has the ability to last as long as traditional silkscreen prints.

(DTF) transfers are full-color heat applied transfers for light and dark garments. No weeding or masking is required and DTF transfers can be applied to cotton, cotton/poly blends, and even 100% polyester. Simply press and go! All you need is a heat press!

### DTF Transfer Application Instructions

1. Preheat the garment for 15 seconds to remove excess moisture. Let the garment cool before adding the transfer.
2. Place the transfer on the shirt – white side down, image facing up.
3. Press at 325°F for 15 seconds under very firm pressure.
4. Remove the garment from the press and let it stand until it is warm enough to peel.
5. Peel warm or cool.
6. Cover the image with parchment paper and press again for 15 seconds. You can use a Teflon sheet, butcher paper, or tissue paper.

# Contract Laser Engraving

## WHAT IS LASER ENGRAVING?

Laser engraving is the process of using a laser to etch or mark the surface of a work piece. Laser engraving can be extremely precise, and have the ability to personalize each piece. Engraving methods vary, depending on the type of work piece and the material, which means in some instances we may need a test piece of material to ensure our laser will etch your product to your satisfaction.

# Contract Full Color UV Print

## FULL COLOR UV PRINT DETAILS

UV printing is a form of digital printing that uses ultra-violet lights to dry or cure ink as it is printed. As the printer distributes ink on the surface of a material (called a "substrate"), specially designed UV lights follow close behind, curing - or drying - the ink instantly. Four color process printing with unlimited colors. Print quality is excellent. The ink drying and curing fast. Once UV led light to contact the substrate surface, the UV ink immediately dries and cures. Product must be pre-approved and tested before we can commit your contract order. Hand wash recommended.

# Contract Sublimated Printing

## SUBLIMATION DETAILS

Sublimation is a chemical process where a solid turns into a gas without going through a liquid stage. This printing method is best used on products such as polyester apparel in white or light colors or hard surfaces with a poly-coating, such as coasters, mugs, mouse pads and more. The sublimation process can only be used on 100% polyester material.

# Contract Full Color Digitally Printed Apparel

## DIGITALLY PRINTED APPAREL

### DIGITALLY PRINTED APPAREL DETAILS

Our printing is best suited for 100% ring-sprung cotton. The process uses a specialized digital printing machine that applies water-based inks that are quickly absorbed into the fibers of the fabric.

Please note: We will use customer(s) items for printing, but we are NOT responsible for any customer supplied garments or fabrics for digital printing service. Expect and plan for a 2% spoilage rate/waste

### PROS

- Full-Color Printing
- Low Minimums
- Highest Detail
- Fast Turn Around Time
- Lower Upfront Cost

### CONS

- 4 Color Process Only
- No PMS Color Matching

High Quality Printing

Premium Materials

Fast Production
